SUMMARY

Full-stack Developer experienced in building, deploying, and maintaining cross-platform production systems (REST APIs, web applications, and mobile apps) used daily by LPG consumers, distributors, and producers. Proficient in the Node.js/TypeScript ecosystem (Express.js, Prisma, NestJS), Laravel, Flutter, and Kotlin, with a strong foundation in relational database design, automated testing, and Linux server deployment. Accustomed to owning the full software development lifecycle, from translating business requirements into technical solutions to debugging across every layer in production.

WORK EXPERIENCE

Full-stack Developer **Sep 2025 – Present**
PT ARSynergy NiX Indonesia *South Jakarta, DKI Jakarta*

- Responsible for designing and building a Node.js REST API (TypeScript, Express.js, Prisma ORM) and PostgreSQL schema that serves as the single source of truth for the entire ArsyGas ecosystem: consumer app, partner app, and admin panel.
- Successfully launched the ArsyGas: Gas yang Benar mobile app (Flutter, BLoC) on Google Play Store and Apple App Store, enabling consumers to order, schedule deliveries, and track LPG orders independently.
- Successfully digitized distributor and producer workflows through the ArsyGas: Partners app (Google Play Store) and the partners.arsygas.id web app, allowing Work Order (WO) creation, confirmation, and selling-price management to be handled directly in the system.
- Responsible for developing and maintaining the Laravel admin panel (Blade, jQuery, SweetAlert2), including delivering a banner management module with drag-and-drop reordering (SortableJS) synchronized with the backend API.
- Responsible for analyzing business processes and turning them into new system modules: automated HMT submission, production liquid calculation from skid tanks, and a distributor shipping-cost calculator based on routes and fleet.
- Ensured application security and availability by implementing JWT authentication and managing deployments on a Linux VPS (Biznet), including Nginx/Apache web server and SSL configuration.
- Entrusted to lead the technical side of replacing ±60,000 RFID + NFC tags on LPG cylinders in Marunda and Gresik, from integrating NFC readers with the weighing system to coordinating tag production and field installation.
- Independently own each project within a two-programmer team; trace root causes and resolve issues across all layers (mobile, API, database, and admin panel) until systems are fully restored.

IT Support **May 2024 – Aug 2025**
PT ARSynergy NiX Indonesia *Gresik, East Java*

- Responsible for maintaining the stability of the company's IT infrastructure, including on-premise servers, networks, and IoT and RFID devices in operational environments.
- Contributed to deployment, updates, and troubleshooting of web and mobile applications alongside the development team, leading to a transition into the Full-stack Developer role.
- Provided decision-support data by writing SQL queries and processing data for company operational reports.

IT Phone Banking **Jan 2024 – Jun 2024**
PT Infomedia Nusantara *Yogyakarta, DI Yogyakarta*

- Responsible for Level 1 technical support, resolving hardware, operating system, and core call center application issues.
- Maintained system reliability through scheduled maintenance and backup and restore procedures in line with operational SOPs.

DEVELOPMENT PROJECTS

FanPos – Multi-Outlet SaaS Point of Sale (POS) Application

Laravel 13, Livewire 4, Tailwind CSS 4, MySQL, Laravel Sanctum

- Built a web-based POS application with a multi-tenant architecture for catering businesses, coffee shops, and restaurants, covering cashier shift management with ledger-based bookkeeping, open PO/down payments, inventory and ingredient recipes, and QR code table ordering.
- Designed a three-tier authorization system (outlet, level, and individual), a subscription model with add-ons and validity periods, and a token-based REST API for mobile app integration.
- Safeguarded transaction data integrity with 330+ automated tests, including concurrency testing with row locking for shifts, payments, voids, and returns.

Carisa – Pet Shop Point of Sale & Management System

NestJS, PostgreSQL, Next.js, Kotlin, Jetpack Compose

- Developed the backend API (NestJS), web admin panel (Next.js), and Android cashier app (Kotlin, Jetpack Compose) for pet shop, grooming, and pet hotel services with multi-branch support.
- Implemented grooming scheduling and pet hotel booking with conflict detection, inter-branch stock transfers, FEFO handling for perishable products, delivery orders with route maps, and photo-based attendance.
- Designed an offline-first Android app with automatic data synchronization and receipt printing via Bluetooth thermal printers; authored a UAT document covering 71 test scenarios.

EDUCATION

Bachelor of Informatics Engineering – Universitas Negeri Surabaya (State University of Surabaya) 2019 – 2023

Computer and Network Engineering – SMK Negeri 3 Jombang (State Vocational High School) 2016 – 2019

SKILLS

Programming Languages: TypeScript, JavaScript, PHP, Dart, Kotlin, SQL, HTML/CSS

Backend: Node.js, Express.js, NestJS, Laravel, Prisma ORM, RESTful API, JWT, Laravel Sanctum

Frontend & Mobile: Next.js, Laravel Livewire, Blade, Tailwind CSS, jQuery, Flutter (BLoC), Kotlin (Jetpack Compose)

Database & DevOps: PostgreSQL, MySQL, Git, Linux Server, VPS, Nginx/Apache, SSL

Engineering Practices: Multi-tenant architecture, automated testing, concurrency control, UAT, system requirements analysis, IoT/RFID/NFC integration, networking (MikroTik)

Languages: Indonesian (native), English (technical proficiency)
